**The First Record of the Genus *Pseudoseioptera* (Diptera, Ulidiidae) in Ukraine [Первая находка рода *Pseudoseioptera* (Diptera, Ulidiidae) в Украине].** — The genus *Pseudoseioptera* Stackelberg was known only from the northern and central European and south of Far East Russia, northern east of China and northern part of North America (Steyskal, 1965; Krivosheina, Kovalev, 1973; Kameneva, Korneyev, 1994). *Pseudoseioptera* has not been ever recorded so far from Ukraine; its presence was completely unexpected. A single ♀ of *Pseudoseioptera demonstrans* Hennig were collected in Kiev, on a poplar (*Populus nigra*) log, 11.05.2002 (Kameneva). Both the genus and the species are recorded from Ukraine for the first time. — **E. P. Kameneva** (Schmalhausen Institute of Zoology, Kyiv).

**The First Record of the Genus *Selachops* (Diptera, Agromyzidae) in Ukraine [Первая находка рода *Selachops* (Diptera, Agromyzidae) в Украине].** — Until the very last time, the genus *Selachops* Wahlberg was believed to occur only in northern Europe, Alps and Far East Russia (Злобин. Двукрылые насекомые, их систематика, географическое распространение и экология. — Л.: ЗИН АН СССР. — 1983 (1984). — С. 45–52). One ♀ of *Selachops flavocincta* Wahlberg were collected in vicinity of Irpin near Kyiv, on a wet meadow, 1.05.1998 (V. Korneyev). Both the genus and the species are recorded in Ukraine for the first time. — **V. A. Korneyev** (Schmalhausen Institute of Zoology, Kyiv).
